

growney's mission is to build a simple, transparent and cost-effective investment solution for retail customers in Germany. To support us in the ongoing development of our web-based platform we are offering a fulltime position as

FULL STACK WEB ENGINEER (JS / PHP)

Responsibilities:

- Develop front- and back-end of state-of-the-art financial services platform
- Improve quality and feature set of the system throughout its whole life cycle
- Contribute to definition of architecture, components, frameworks, interfaces, and other relevant characteristics of the software system enabling security, quality control, and scalability

Your profile

- Minimum of two years agile programming practice in a commercial context
- Excellent knowledge of the server-side JavaScript ecosystem (Node.js) and cloud systems, ideally AWS
- Experience in developing RESTful APIs
- Knowledge of PHP[5|7] or other OOP language, as well as working knowledge of MVC frameworks (Zend Framework, Yii, Symfony2 or similar)
- Comfortable with agile programming methodologies and DevOps
- Knowledge of a relational database management system like MySQL
- Experience with unit and integration testing
- A Computer Science background considered a plus
- Excellent English communication skills, verbally and written (German not required)

What we offer

- Work closely with an experienced team of financial experts and software engineers
- Take responsibility from day one
- Flat hierarchies and short decision paths, leaving you with lots of creative freedom
- We offer an education budget to be spent on your self-development
- Competitive Salary with an employee bonus scheme
- Central office in Berlin-Mitte
- Flexible working hours

If you would like to join our team, please send your application in German or English at career@growney.de and notice our Data protection at <https://growney.de/datenschutz.html>
